

Sabbath Greetings to everyone!

While the US Media has been spewing unending chatter about the primary elections or football this week, the ZIKA virus is causing panic south of the border.

The Washington Post reported: “Experts have speculated that places like Colombia—where the Zika pathogen carrying mosquitoes are believed to have arrived about five months after showing up in Brazil—could see the explosion of a “time bomb” of microcephaly cases in the coming months. Up to 650,000 Zika infections are expected.”

Five nations in South America have issued urgent pleas for women not to get pregnant for at least the next two years—a difficult challenge in areas that are remote or mainly Roman Catholic.

Where did ZIKA come from? In a shocking report, Natural News reported this week that it likely came from a genetic alteration project funded from the US.

“The latest revelation regarding the Zika virus involves a genetically-altered mosquito project funded by the Bill and Melinda Gates Foundation—an experiment which some suspect may have caused the rapid spread of a once-rare disease that is now expected to circulate around the globe. Zika virus has been linked to a birth defect called microcephaly, which causes babies to be born with brain damage and usually small heads.

Brazil has been labeled the “epicenter” of the Zika virus outbreak, with more than a million cases reported there. Perhaps not coincidentally,

Brazil is also the site where the GM mosquito project was carried out—and it involved the same strain of mosquito said to be responsible for the spread of the virus.” (NaturalNews.com)

From The Event Chronicle: “The Zika virus, which has been detected in 18 of the 26 states in Brazil, is transmitted by the *Aedes aegypti* mosquito. A genetically modified version of which has been developed by a British biotech company called Oxitec.

“The results of a trial in Brazil published this summer involved genetically engineered mosquitoes that allegedly fight the spread of dengue fever, yellow fever, chikungunya, and Zika virus. However, scientists warned the study had too few controls in place to ensure that the mosquitoes released into the wild did not end up spreading dengue fever, yellow fever, chikungunya, and Zika virus. These genetically modified mosquitoes could be the cause of the Zika virus outbreak in Brazil and other parts of South and Central America.”

There may be no conclusive evidence yet that the GM mosquito project funded by Gates has actually caused the spread of Zika, but it’s a possibility well worth investigating.” Gates has given presentations several times (these are on YouTube) stating that GMO’s and vaccines should be used to reduce world population by 15%.

Our world is rapidly becoming a cesspool of chemicals, poisons, and genetically altered plants and animals. When our Creator made the earth He said that “everything is good.” The false theory of evolution gives men permission to pretend that they are creators, with the result that our world at some point might be uninhabitable.

Once again we find that God’s Word is right. “For we know that the whole creation groans and labors with birth pangs together until now.” Romans 8:22.
